

## Metro Express Announces Implementation of Epay Manager

ST. LOUIS, MO. (02/10/03 08:00 EST)

Metro Express is pleased to announce the implementation of the latest release of Epay Manager, [www.epaymanager.com](http://www.epaymanager.com), an electronic payment system application designed for the transportation industry.

The implementation of Epay Manager's exclusive payment terms grid allows Metro Express to offer flexible payment terms, allowing carriers to select the payment and discount options that meets their needs at the time of service. Once a payment option is selected, Epay automatically schedules and pays the invoice on the specified date.

"We have used Epay Manager since April 2002 to pay more than seventy vendors electronically. Metro Express has seen a significant savings in both time and money since we have begun using the system. The amount of mail we now receive is greatly reduced since all of the invoices and proof of deliveries are created and transmitted electronically. The efficiency of this system has allowed our Accounts Payable staff to perform other duties," says Tom Whaley, President of Metro Express.

The new additions to the application include refined displays of all lists and reports to give the user more information. They also include refinements in the batch invoicing and approval processes and the proof of delivery system. Each of these additions allows Metro Express to better serve their vendors in a more efficient manner and results in faster payment for all of their carriers.
