

## Level One Launches Epay Manager v3.0

ST. LOUIS, MO. (06/16/04 08:00 EST)

Level One Technologies, Inc. is pleased to announce the latest release of Epay Manager, Version 3.0. This version is the largest update of the application in the last year and includes new functionality for the end user. Because Epay is a web-based application, members do not have to install updates or new software. The new release is available to members, by simply logging in.

"The development team for Epay Manager is consistently looking for ways to improve the system and offer more flexibility to our members," says Jason Kirkpatrick, Operations Manager. "Version 3.0 is a pre-planned extension of Version 2.0 with many added features, including the ability to create and manage multiple payment and fee terms relationships between payers and payees."

Earlier versions of Epay allowed members to create universal fee and payment term schedules and apply them to all payees in the system. The new version allows members to create multiple fee and payment term schedules and assign them uniquely to payees in the system. The new version also allows payers to create a private list of payees and manage payment preferences for these payees with very little effort.

New pieces have also been added that make the process of creating and managing payment and fee term schedules easy and more user friendly. In addition, the transaction entry process has been modified to capture and retain more information, making the data entry process for low volume users, faster and more efficient.

Other improvements include removing the Java requirements from the system menu, allowing companies with strict firewall permissions to access our navigational tools.

"We are very excited about these new advancements and we believe they'll be of great value to our members. In the third and fourth quarters of this year, we are planning additional releases that will further enhance our system. These releases demonstrate that Epay Manager is an ever changing and growing application," says Tom Whaley, President.

Level One is located in St Louis, Missouri and provides web-based software solutions for the transportation industry. In addition to Epay Manager, the company has developed document imaging software and Freightlist.com, a web-based dispatch program serving the third party market.
