

Level One Enhances Epay Manager with Freight Distribution List

MARYLAND HEIGHTS, MO – July 26, 2007

Level One Technologies is pleased to announce the implementation of Epay Manager's innovative freight distribution list. This unique system allows shippers to electronically tender loads to carriers. Available loads are sent via email and can be viewed on an interactive web page. With this application, companies will be able use their existing carrier database more effectively and rely less on traditional load posting services. This value added service compliments Epay's electronic invoicing and payment system, that allows shippers to electronically exchange invoices and proof of delivery documents online and make payments to carriers via direct deposit.

The freight distribution list uses a shipper's dispatch software and carrier database to communicate available loads to trusted carriers. As new loads become available, participating carriers receive an interactive list of available loads. The list is organized so that carriers can quickly review load requirements and submit a bid when they have available equipment. Using links provided on the email, or on the available load list, carriers will have the opportunity to bid on each load. These links will allow carriers to accept posted terms, propose a custom offer, or decline the shipment.

After the carrier submits a bid, the system instantly organizes and presents them online for the shipper to review. With this system, shippers will be able to gather a large number of responses in a matter of minutes; an outcome that is not possible with traditional methods of procurement. With Epay, shippers can electronically award loads to the most qualified carrier and notify other carriers when the load is no longer available. This enhanced level of communication reduces the number of telephone calls with carriers inquiring about available loads or the status of a bid.

This interactive distribution list will ensure that carriers are always notified when new freight is available. It will also allow shippers to book more freight with their most trusted

carriers. The list is an effective tool that allows companies to quickly communicate available loads to their carrier base. It's the most recent example of Level One's commitment to providing companies with the ability to strengthen carrier relationships through technology.

About Level One Technologies, Inc.

Level One Technologies provides transportation companies with innovative, web-based applications that streamline common business practices and promote economic opportunities between its members and their carriers and customers. In addition to freight distribution software, Epay Manager provides an online accounts payable system designed for the transportation industry. The system is designed to build stronger, more profitable relationships between its members by allowing shippers and carriers to exchange invoices and PODs and make and receive payments electronically.
