

Triple T Transport Implements New Electronic Freight Tendering System

MARYLAND HEIGHTS, MO – November 13, 2007

Level One Technologies is pleased to announce Triple T Transport's decision to use Epay Manager's electronic freight distribution list. This system will integrate with Triple T's load dispatch software to communicate available loads to its active carriers. Available loads will be sent to Epay Manager and distributed to Triple T's carriers via email. These loads can also be accessed online. Each list will be organized so that carriers can quickly review load requirements and submit a bid when they have available equipment.

As carriers submit bids, the system organizes and displays them online, so that Triple T's dispatchers can review bids and award loads to the most qualified and cost effective carriers. When a load is electronically awarded, the winning carrier is notified, and an email is also sent to other carriers notifying them that the load is no longer available. This enhanced level of communication will reduce the number of telephone calls from carriers inquiring about available loads or the status of a bid.

Triple T Transport plans to use the system to reach its carriers faster than traditional methods, which include calling favored carriers or sending out blast faxes. Epay's distribution list will give participating carriers immediate access to available loads and allow them to make bids without sorting through numerous emails or posting services. It will also provide Triple T's dispatchers the ability to electronically collect a variety of bids from carriers, sort them and award the load to the most qualified carrier.

"It is our objective to better utilize our existing database of carriers, rather than relying heavily on load posting services that often require using new carriers. Epay's distribution list will allow our dispatchers to quickly and efficiently broadcast our available loads to a large number of carriers that have established track records with our company. Not only will this process make our office more efficient, but it will benefit our active carriers by giving them first access to our new loads. By giving carriers continuous access to new loads, we believe we can build a loyal carrier base that will allow us to better serve our customers," said Darin Puppel of Triple T Transport, Inc.

About Triple T Transport, Inc.

Triple T Transport has its corporate headquarters in Lewis Center, OH. The company is a comprehensive provider of transportation and cost effective logistics solutions for various industries in the United States.
